What do you need to prepare to get the full benefits of Copilot?

Document management

Migrating to Office 365 requires planning and management. Trustmarque offers a two week engagement to identify document management needs and design solutions, including migration from traditional IT document stores and legacy systems. The service also covers advice and support for transitioning hard copy records to electronic formats.

Office 365 collaboration

Trustmarque offers professional consultancy teams to design and implement collaboration solutions using Office 365 services. These solutions aid collaboration around business processes within a team or across the organisation. Trustmarque can also develop secure areas for collaboration among multiple organisations, such as partner portals for sharing content.

Information governance

Trustmarque's professional services team can assist in designing and implementing solutions to secure and govern content and information within Microsoft 365. We offer expertise in structuring and securing information to meet regulatory requirements or organisational policies.

One Drive

Trustmarque offers professional services to set up and deploy OneDrive for Business securely. We also provide migration services to reduce reliance on traditional datacentre services and storage by transferring files from traditional network file shares.

Adoption and change

Implementing a new technology is only half the battle, as user adoption will determine its success. Trustmarque offers adoption and change management services, including business change management, communications, adoption consultancy, user training, champion enablement, and online e-learning solutions, to reduce the risk of resistance and rejection by users.

Exchange Online

Trustmarque offers professional services to assist organisations in migrating mailboxes from on-premises Exchange servers to Cloud Exchange Online in Office 365. Our services include support for migrating PST files, archives, and other email-related services and content.

Security identity and access

The service helps organisations leverage advanced security capabilities for identity and access in Office 365, EMS, and Microsoft 365. It designs a secure solution based on subscriptions and third-party integration to meet IT security strategies and implement features such as MFA, PIM, and conditional access.

Teams

Trustmarque offers professional services to assist organisations in upgrading from Skype for Business or deploying Microsoft Teams for the first time. Our team can guide users on which services such as voice, meeting rooms, or process collaboration to provide the greatest value based on their work requirements.

Our Microsoft designations

Investing time and resources in achieving Microsoft's designations demonstrates our commitment to your success. We are outcome obsessed and assure results for people like you when we deploy Microsoft's world-leading intelligent, cloud-first, digital technologies.
